Cartridge Emulsion Explosives

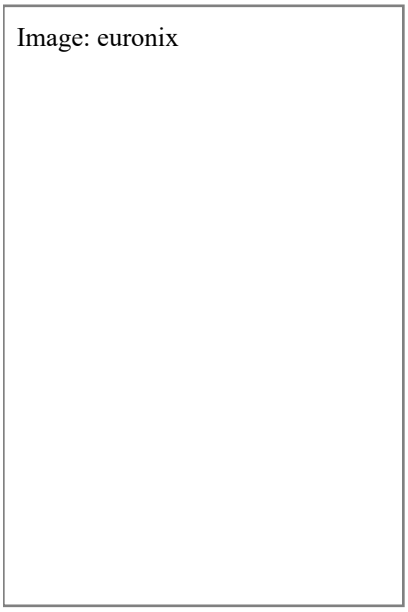

EPC-France has developed and manufactures a full range of emulsion explosives. The variety of formulations and sensitivity methods (gasification or glass micro-beads) supplies products which are suitable for all types of work sites and uses.

The explosive emulsions NITRAM 5 and 9 are among the most recent developments in industrial explosives advanced by EPC-Belgique. The CyberPower emulsions are the foundation of the range. They are easy to load in a waterlogged shot.

The emulgel EXPLUS represents our upper range of emulsions. Reaching a power comparable to dynamite, it offers an excellent load foot.

or the most demanding conditions, the EXPLUS TSR is ideal. Reinforced with glass microspheres, it combines strength and resistance to compression, making it perfect for use in primer cartridges.

For the most demanding conditions, the EXPLUS TSR is ideal. Reinforced with glass microspheres, it combines strength and resistance to compression, making it perfect for use in primer cartridges.

EPC-France has developed a range EURONIX especially designed for avalanche management. EURONIX is a very powerful emulsion, packaged in red, which makes it easy to find in snowy and misty conditions.
