

SEISMOGRAPH VIBRACORD DX

Image: sismographe_epc

The VIBRACORD DX is a recorder with built-in geophone sensors that can measure in one point the vibrations generated either by blasting or by other sources.

The acquisition is triggered by threshold violation. The signals are digitized and transferred to a computer for display and processing in accordance with to the Ministerial Decree of 22/09/1994. The VIBRACORD DX can be connected to a modem for continuous vibration monitoring and can transfer data offsite.
